Multiplayer Game Framework

David Jarman
Marshall Gaucher
Kevin Worner

Innovative Systems

Overview

Create a framework that can be used to develop multiplayer games for Set-Top Boxes without the need to edit existing firmware for game releases

Requirements

Central server

Up to 5,000 concurrent games

Games implemented as plugins

Generic view for board games

Efficient message protocols

Server Features

Dynamically loaded plugins

Scalable up to 10,000 players

Portable to the cloud

Unit and Load testing tools

Client Features

Play games using remote control

Standard interface across games

Single and multiplayer games

Languages

C# and C++

Frameworks

.NET 4.5 and Qt

Reactive Extensions

Microsoft Fakes

Acknowledgements
